SUMMARY

I build automation systems that save businesses hours of manual work — from web scraping and API integrations to AI agents in production. Platinum freelancer on Workana (5.0★, zero missed deliveries) specialized in e-commerce integrations. In 2026 I shipped 10+ live products solo, including two with real paying customers. Open to remote roles, freelance projects, and hackathon collaborations.

CORE SKILLS

Automation: Python, web scraping (Playwright, BeautifulSoup), API integration, data pipelines, ETL, Telegram bots

AI & LLMs: Claude API, OpenAI, agent pipelines, RAG, vector search, structured outputs

Engineering: FastAPI, Postgres, SQL, Next.js, TypeScript, Stripe, Git

Cloud & Infra: Railway, Google Cloud, Docker basics, Linux, CI/CD

Languages: Spanish (native), English (fluent)

CLIENT WORK

E-commerce platform integrations

Mercado Libre · Shopify · Bsale · JumpSeller APIs

Catalog and stock sync, sales dashboards, and ticket automation for e-commerce sellers. Example: a seller running 4 Mercado Libre accounts from Excel → fully automated (5★ review and a referral).

Workana Platinum · 5.0★ · 0 missed deliveries · ~2 years active.

Web scraping systems

Python · Playwright · BeautifulSoup

Scrapers built for clients — handle JS rendering, anti-bot patterns, retries, and clean data export.

Outcome: replace hours of manual data collection per week with one cron job.

API integration systems

Python · FastAPI · Postgres

Small Python services that connect third-party APIs (CRMs, ads, payments) so the client's stack sees one consistent interface.

Outcome: stop juggling 4 dashboards. One source of truth, updated automatically.

SELECTED PRODUCTS (ALL LIVE)

Helix · helix-tau-two.vercel.app

Next.js · FastAPI · Gemini 2.5 · MongoDB Atlas · Shopify

Autonomous commerce agent that recalls prior product launches via MongoDB Atlas Vector Search, reasons through pricing/positioning with citations, publishes drafts to Shopify, and consolidates each run back into operational memory.

Built for the Google Cloud Rapid Agent Hackathon (MongoDB track). Memory is the product, not the chat.

CLOSER · closer-production-e0e3.up.railway.app

Next.js 16 · React 19 · Claude Sonnet 4.6 · SSE

Intent-first AI SDR: a 4-agent pipeline (Prospector → Qualifier → Researcher → Outreach) scans HackerNews, Reddit and Stack Exchange for public buying-intent posts, qualifies fit, and writes a personalized first outreach message — streamed live to the browser.

Signal-based selling vs. cold-spam lists. Built for the International AI Agents Hackathon.

Leads MX & LocalGrowth · leads and local-business SaaS

Python · Next.js · Stripe · Railway

Two self-serve products with live Stripe billing: Leads MX sells curated business-lead datasets for Mexico (first paying customers, Aug 2026); LocalGrowth (localgrowth.work) productizes local-business digitalization — landing, CRM, and subscription plans.

First products with real revenue — built, priced, and sold end to end.

AIONIS · aionis-production.up.railway.app

Next.js · Supabase · Claude Sonnet 4.6 · react-flow

Anti-chatbot Socratic STEM tutor: never gives the answer. Guides you to reconstruct a concept from first principles over a dependency graph and pinpoints exactly where your understanding breaks.

Built solo in 23 days for DSH Hacks V1 (AI × STEM education).

BLUEPRINT · blueprint-production-50d0.up.railway.app

Next.js 16 · Claude Sonnet 4.6 · next/og · Railway

Decodes any GitHub username into an archetype, builder score, signature pattern, and a real next-startup idea — with a unique Open Graph card per report.

Built solo for NEXA Hack 2026 / HACKHAZARDS, Developer Tools track.

Prompt Forensics · live on Railway

Static analysis · 14 detectors · Claude

Security scanner for production LLM prompts: 14 detectors across 8 vulnerability categories (instruction override, role hijack, secret exposure, PII, indirect injection...) with AI forensic notes per finding.

Security × AI angle. Shipped in one afternoon for UOE Summer of Code 2026.

RECOGNITION

- **Workana** — Platinum level, 5.0★, 0 missed deliveries across ~2 years; specialty: e-commerce integrations.
- **Talent Land México 2026** — top 15, Banco Azteca track (AI finance assistant).
- **2026 hackathon run** — 8+ entries shipped with live demos: Google Cloud, HACKHAZARDS, DSH Hacks, AlgoFest, UOE Summer of Code, DataHub Agent Hackathon, World Product Day.

JOURNEY

Python Automation Developer — Freelance & indie builds

2026

Mexico City · Remote

- 10+ live products deployed solo this year — AI agents, SaaS, security tooling.
- First paying customers on my own products (Leads MX, LocalGrowth).
- Platinum freelancer on Workana: e-commerce integrations for real sellers.

First revenue experiments

2025

Side bets · Self-directed

- Tested small products and content experiments to learn what people actually pay for.
- First paid automation projects.

Started building online

2024

Self-taught

- Began shipping small tools, automations, and side projects.
- Got hooked on the build-publish-learn loop.

GOAL

Build a company that solves real problems and gives me the freedom to work from anywhere — starting with the automations and AI tooling I'm shipping today.
