SUMMARY

Python automation developer focused on web scraping, API integration, and data pipelines — I help businesses automate repetitive work so their teams can spend time on what actually matters. Currently expanding into AI agents and LLM-powered tooling, and shipping indie experiments on the side. Open to remote roles, freelance projects, and hackathon collaborations.

CORE SKILLS

Automation: Python, web scraping, API integration, data pipelines, ETL, workflow automation

AI & LLMs: OpenAI, LangChain, agents, prompt eval, RAG

Engineering: FastAPI, Postgres, SQL, Next.js, TypeScript, Git

Cloud & Infra: Google Cloud, Railway, Docker basics, Linux, CI/CD

SELECTED PROJECTS

Web Scraping Toolkit

Python · Playwright · BeautifulSoup

Collection of scrapers built for clients — handles JS rendering, anti-bot, retries, and clean data export.

Every business has data trapped in someone else's UI. I free it.

API Integration Engine

Python · FastAPI · Postgres

Reusable framework to glue third-party APIs (CRMs, ads, payments) into a single source of truth.

Most "automation" problems are really integration problems.

AI KPI Debugger

Python · SQL · APIs

Compares advertising metrics across platforms and surfaces reporting mismatches in real time.

Built to understand cross-source analytics discrepancies that quietly waste ad budget.

AI Agent Experiments

Python · OpenAI · LangChain

Small vertical agents that complete real tasks end-to-end — research, data entry, follow-ups.

Learning what LLMs can actually do in production, outside the demo bubble.

Google Cloud Hackathon Build

Google Cloud · Python · AI

AI + cloud-native prototype in development for the upcoming Google Cloud hackathon.

Pressure-test what I can ship in a weekend with real infra.

JOURNEY

Python Automation Developer — Freelance & indie builds

2026

Mexico City · Remote

- Helping businesses automate repetitive work with web scraping, API integrations, and data pipelines.
- Prototyping for AI + cloud hackathons (Google Cloud focus).
- Shipping AI agent experiments and documenting the process publicly.

First revenue experiments

2025

Side bets · Self-directed

- Tested small products and content experiments to learn what people actually pay for.
- First paid automation projects.

Started building online

2024

Self-taught

- Began shipping small tools, automations, and side projects.
- Got hooked on the build-publish-learn loop.

GOAL

Build a company that solves real problems and gives me the freedom to work from anywhere — starting with the automations and AI tooling I'm shipping today.
